in hydrography, we are used to working underwater where no positions are available from satellite navigation systems. in other professional fields, experience has shown that position updates from satellites may not always be available, or are potentially incorrect: examples are unintentional jamming of the extremely weak gnss signals and ... **from bohnenberger's machine to integrated navigation ...** - from bohnenberger's machine to integrated navigation systems, 200 years of inertial navigation ... leading into modern inertial navigation systems. l. foucault is, however, not the originator of gyros with cardanic suspension. he was familiar with this mechanical principle because such instruments were already employed in many french schools to explain the precession of the earth rotation axis ... **sensors 2012 sensors - mdpi** - sensors 2012, 12 6332 used for underwater and indoor navigation. meanwhile, gps signals are easily disturbed, so gps based navigation systems cannot work alone in some situations such as navigation for airplanes [4,5]. **continuous high precision navigation using mems inertial ...** - in a modern mobile mapping system, the navigation component usually consists of a gps receiver and an inertial navigation system (ins), which can provide accurate geo-referencing to the imaging sensors [1][2]. to achieve centimetre-level positioning accuracy, rtk-gps is a natural choice. however, rtk-gps in urban areas suffers from**********
